Claim 19 (original): A system as recited in claim 15, wherein the first computer system posts the configuration details to a URL (universal resource locator) at the Web site.

Claim 20 (original): A system as recited in claim 19, wherein the second computer system addresses the URL to access the configuration details.

Claim 21 (original): A system as recited in claim 15, wherein the second computer system creates a trading partner record and automatically populates the trading partner record with the configuration details.

Claim 22 (original): A electronic commerce system, comprising:

a first component at a first trading partner, the first component collecting configuration details associated with the configuration details to a Web site; and

a second component at a second trading partner, the second component retrieving the configuration details from the Web site and automatically configuring a trading relationship with the second trading partner using the configuration details.

Claim 23 (previously amended): A electronic commerce system as recited in claim 22, wherein the first component presents a graphical user interface to enable a user to enter the configuration details.

Sub >0

Claim 24 (previously amended): A electronic commerce system as recited in claim 0, wherein the first component posts the configuration details to a URL (universal resource locator) at the Web site.

Claim 25 (previously amended): A electronic commerce system as recited in claim 0, wherein the second component addresses the URL to access the configuration details.

Claim 26 (previously amended): A electronic commerce system as recited in claim 0, wherein the second component creates a trading partner record and automatically populates the trading partner record with the configuration details.

Claim 27 (original): A software architecture for an electronic commerce system having trading partners that exchange data over a network, comprising:

first program code stored on a computer-readable medium at a first trading partner, the first program code having computer-executable instructions that, when executed by one or more processors, collect configuration details associated with the first trading partner and publish the configuration details to a Web site; and

second program code stored on a computer-readable medium at a second trading partner, the second program code having computer-executable instructions that, when executed by one or more processors, retrieve the configuration details from the Web site and automatically configure a trading relationship with the second trading partner using the configuration details.
